Ex2 Friday: pocket guide

Test 09:30 to 16:00. One 30-minute break (12:30 to 13:00). Screenshots: **max 5 pages A4.** Upload to **Blackboard**. Submission is **final**.

Rules

1. Stuck 10 minutes? Say “the next step is ____”. Write your assumption. Move on.
2. Retype your prepared work in your own words. Do not paste.
3. Protect **Malware** and **Threats** first (merit and distinction).
4. Honest labels: **Observed** or **Known**. Never write “secure”.

Schedule

#	**Block**	**Clock**	**Done**
1	Intel table	09:30 to 10:30	☐
2	Malware table	10:30 to 11:30	☐
3	Threat table	11:30 to 12:30	☐
	Break	12:30 to 13:00	☐
4	Lab evidence, screenshots	13:00 to 13:30	☐
5	Assurance strategy	13:30 to 14:05	☐
6	Justification	14:05 to 15:05	☐
7	Final check, UPLOAD	15:05 to 15:45	☐
8	Buffer, no new work	15:45 to 16:00	☐

What earns what

Topic	**Pass**	**Merit**	**Distinction**
Malware	Mechanisms	Obfuscation	Own tools
Threats	Enriched view, lab test	Services and processes	Mitigations
Assurance	Strategy	none	none
Legal	Evidence handling	none	none

1. Intel table (09:30 to 10:30)

Done when: every row has all 8 columns, and 2 external sources are cited.

☐ One real lookup per row, short result in Enrichment

☐ Hash: VirusTotal (family, detections)

☐ Domains: WHOIS (owner, created date)

☐ IPs: ASN lookup (who owns the range)

☐ Read one NCSC page and one OWASP page

☐ Write title, URL, date accessed for each

☐ Reliability: High (seen in CAPE or 2+ sources), Medium, Low

☐ Fill Confidence and Action

☐ Mark Microsoft, Akamai, Let’s Encrypt as allowlisted, with reason

☐ Mark `1.0.0.0` etc. as false positives (version strings)

☐ Write 2 lines: what changed after enrichment

2. Malware table (10:30 to 11:30)

Done when: Table 2 is checked and the merit paragraph is written.

☐ Each Fig really shows what the row claims

☐ Check every ATT&CK ID against Fig 7

☐ IDs not in Fig 7 (T1566): look up on attack.mitre.org

☐ Can’t confirm an ID? Delete it

☐ Each row says **Observed** or **Known**

☐ Exfiltration is **Known**, not observed

MERIT (do not skip)

☐ Write 3 lines: how I saw past the packing

☐ Static: one import, high entropy (Figs 1, 2)

☐ Sandbox: process injection (Fig 3)

☐ YARA hits on the process dumps (Fig 4)

☐ Write 2 lines: why the triage said “low” but YARA said Agent Tesla

☐ Write 1 line: what is mine vs the pre-written script

DISTINCTION (only if true)

☐ Did you script or adapt a tool yourself? If not, skip. Do not claim it.

3. Threat table (11:30 to 12:30)

Done when: 6 rows complete, a mitigation on each.

☐ Write 3 lines: assets, entry points, trust boundaries

☐ Boundaries: device to API, API to database

☐ Say the SaaS assumption

☐ Tested? = **No** unless you have evidence

MERIT (do not skip)

☐ Row 4 helpdesk reset: 1 sentence, how an employee enables it unknowingly

☐ Row 5 supplier access: 1 sentence, same question

☐ Row 6 API tokens: Tested? = Yes, Figs 9a and 9b

DISTINCTION

☐ Every row has a mitigation in the Control column

4. Lab evidence and screenshots (13:00 to 13:30)

Done when: lab test written up, screenshots fit in 5 pages of A4.

☐ Target was the Ex1 sync app only. Note it in the log

☐ Write 4 lines: 200 invalid tokens, all 401, no lockout seen

☐ Finding: no rate limiting seen

☐ Mitigation: rate limit, lockout, long random tokens

☐ Write “200 attempts is a small sample”

☐ sqlmap: 752 x 400 responses

☐ sqlmap result is **inconclusive**, not “safe”

☐ Paste Figs 1 to 9b into one document

☐ Check the page count: 5 or fewer

☐ Number each figure, add a one-line caption

If over 5 pages, cut in this order

1. Crop Fig 7 harder
2. Stack 9a and 9b together
3. Merge Figs 5 and 6
4. Drop Fig 8

Figure map

Fig	Shows
1	Triage report (static)
2	CAPE static, packed warning, VT/MWDB/Bazaar
3	Process tree
4	YARA hits on dumps
5	Modified files
6	Registry keys
7	ATT&CK matrix
8	DNS requests
9a, 9b	Token test (single, 200)

5. Assurance strategy (13:30 to 14:05)

Done when: objectives, a 5-row test plan, and the four approaches. **Pass only: stop on time.**

☐ What needs assuring: patient records, clinician devices, sync API

☐ 3 security objectives

☐ 3 acceptance criteria you can measure

☐ Test plan table: Test, Scope, Expected, Owner, Evidence, Priority

☐ 5 rows or more

☐ Priority rule: asset criticality, threat likelihood, vulnerability severity

☐ Four approaches, one example each:

☐ … design and implementation

☐ … intrinsic (give 2)

☐ … extrinsic (give 1: independent pen test, with benefits and limits)

☐ … operational policy and process

☐ 2 lines: “trusted” versus “trustworthy”

☐ 2 lines: how third-party testing contributes

☐ Findings: record, rate, fix, retest

☐ Retest triggers: release, supplier change, new threat

6. Justification (14:05 to 15:05)

Done when: 900 to 1,100 words, retyped in your own words, no [CONFIRM] left.

☐ Open the draft. Read **section 1** only

☐ Check each claim against your figures and tables

☐ Delete anything not true of your work

☐ Retype section 1 in your own words (about 12 min)

☐ Resolve each [CONFIRM]

☐ Repeat for section 2, then 3, then 4

☐ Section 3 must match your block 5 strategy

☐ Add one thing you did that the draft missed

☐ Every Fig and Table mentioned by number

☐ Count words (body only). Target 1,000

Under 900? Add a sentence on what you did not do or would add next. **Over 1,100?** Cut the longest sentence in the longest section.

7. Final check and UPLOAD (15:05 to 15:45)

☐ Words 900 to 1,100

☐ Every Fig and Table mentioned by number

☐ Screenshots 5 pages A4 or fewer

☐ Same hash in Table 1 and the justification

☐ RoE, tables, figures and justification are all in the upload

☐ No [CONFIRM] or [N] left

☐ Own work vs pre-written is clear

☐ No sample, credentials or real personal data in the upload

☐ File names clear, formats as the pack asks

☐ Upload to Blackboard

☐ Shows as submitted; screenshot the confirmation

☐ Upload failed? Retry, then tell your supervisor. Note the time

Submitted at: _____

8. Buffer (15:45 to 16:00)

Do not start new work.

If you run short of time

1. Malware merit paragraph + Threat table
2. Hash + evidence-handling paragraph
3. Short assurance: objectives, test plan, four approaches
4. A short honest justification beats a missing one
