Ex2 Thursday: keep-on-track sheet

Full detail is in the Thursday guide. This sheet only keeps you on time. **Start time:** _____ **Finish by:** _____

Rules

1. 15 minutes over a box? Stop. Move on. Come back at the end.
2. Screenshot straight after each step. Log it on the evidence sheet.
3. Lab VMs only. Revert to **`clean`** after each test.
4. Never cut: evidence for every highlighted topic, the hashes, notes for tomorrow.
5. Stuck? Water, say “the next step is ____”, write your assumption, move on.

Highlighted (mandatory) topics in my brief: ☐ Malware ☐ Threats and attacks ☐ Assurance ☐ Legal and ethics ☐ Autopsy ☐ Justification

Schedule (6 hours)

#	Block	Mins	T+	Clock	Done
1	Start of day	30	0:30	____	☐
2	A. Malware	115	2:25	____	☐
	Break	10	2:35	____	☐
3	B1. Intel	25	3:00	____	☐
4	B2. Threat model	30	3:30	____	☐
5	B3. Scans	40	4:10	____	☐
	Break	10	4:20	____	☐
6	B4. Attacks	40	5:00	____	☐
7	Tidy, log, upload	50	5:50	____	☐
8	Buffer or extras	10	6:00	____	☐

Quick ticks

1 Start (30) ☐ folders ☐ brief read, verbs highlighted ☐ rules of engagement written ☐ VM snapshots **`clean`** ☐ app running, **`test_sync.sh`** 10 PASS ☐ Nessus activating ☐ sample downloaded in VM ☐ M57-Jean hashed

2 Malware (115) ☐ A1 safe setup + SHA-256 ☐ A2 triage + strings ☐ A3 sandbox run + screenshots ☐ A4 static vs dynamic ☐ A5 verdict + YARA + CareLink actions ☐ VM reverted

3 to 5 Threats (95) ☐ B1 method, sources, 3 threats ☐ B2 diagram + STRIDE ☐ B3 nmap ☐ Nikto ☐ dirb ☐ Burp ☐ Nessus export

6 Attacks (40) ☐ SQLMap ☐ 200 wrong tokens ☐ abuse table ☐ one fix retested ☐ DB cleaned

7 Wrap (50) ☐ evidence log complete ☐ hashes noted ☐ sample removed from upload ☐ upload done and confirmed ☐ Autopsy opens ☐ Friday sticky note

Extras (only if ahead) ☐ obfuscation / evasion ☐ own script edit ☐ process threats ☐ their mitigations

Sheet A: malware capture

Sample

Item	Value
SHA-256	
MD5 / SHA-1	
Source and date	
VirusTotal family / detections	
File type and size	
Compile time (may be faked)	
Packed? Entropy	
Tool used for dynamic run	

Sections and entropy

Section	Size	Entropy	Note

ATT&CK techniques

ID	Technique	Tactic	Confirmed or suspected	Fig

IOCs

Type (IP, domain, URL, file, key, mutex)	Value	Seen in (static / dynamic)

Static vs dynamic

Behaviour	Static	Dynamic	Agree?
Starts processes / injects			
Persistence			
Network / C2			
Files / data touched			
Evasion			

Verdict (one line): _____

Five headings (how it gets in / runs / persists / talks out / hides):

Heading	What I found	Fig
Gets in		
Runs		
Persists		
Talks out		
Hides		

YARA: hit on sample ☐ no hit on clean file ☐ What I changed: _____

CareLink actions

Action	Detect, contain or mitigate	Links to my Ex1 control

Sheet B: threats and attacks results

Three threats (B1)

#	Threat	Asset	Source (rated A/B/C)	Ex1 control
1				
2				
3				

Top 3 risks from STRIDE (B2)

Threat	Likelihood 1-5	Impact 1-5	Score	After controls

Scans (B3). Target IP: _____

Tool	Top finding	Real or false positive?	Action	Fig
nmap				
Nikto				
dirb				
Burp				
Nessus				

Attacks (B4)

Attack	Worked?	Impact if it had	Why it held / fix	Fig
SQLMap				
200 wrong tokens				
Read-only token writes				
Revoked token				
Expired token				
Same note twice				
3 MB note				
Malformed JSON				
GET not POST				
Token over plain HTTP				

Fix I applied and retested: _____ Before: ____ After: ____

IDOR / bad upload: not applicable because _____

Extras (item 12): process threats and mitigations

Process threat	Mitigation
Helpdesk reset	
Supplier access	
Leavers	

Sheet C: evidence log

Hashes (record before opening anything)

Item	SHA-256	Source	Date
Malware sample			
M57-Jean image			

Fig	What it shows	File name	Used in
01			
02			
03			
04			
05			
06			
07			
08			
09			
10			
11			
12			
13
